INFORMATIONS

COTISATION 1939 :

Nous prions Messieurs les Présidents des Comités Nationaux qui n'ont pas encore versé la cotisation pour 1939, de bien vouloir faire les démarches nécessaires pour que celle-ci soit réglée le plus rapidement possible sur la nouvelle base adoptée par l'Assemblée Générale 1938, soit 150 francs-or par unité statutaire.

CONTRIBUTION 1939 :

We beg the Presidents of the National Committees whose contribution for 1939 has not yet been paid, to make the necessary steps for its payment, as soon as possible on the new basis adopted by the General Assembly 1938, that is 150 gold-francs per statutory unit.

COMITE NATIONAL AUSTRALIEN

AUSTRALIAN NATIONAL COMMITTEE

N°550 : Bulletin n°127 - RADIO RESEARCH BOARD - Report n°14 -

CONTENTS :

1. Further Studies of Directions of Atmospherics at Toowoomba and Canberra, by H.C. Webster, G.H. Munro, and A.J. Higgs.

Summary : The paper discusses further results obtained by an expedition to Toowoomba (Queensland). Simultaneous observations of directions of atmospherics at Toowoomba and Canberra gave the location of the sources of the atmospherics. A more detailed analysis than that given in previous papers has been aimed at in order to enable a more accurate comparison with meteorological records and conditions.

It has been possible to supplement previous informations regarding the duration, activity, and distribution of sources, particularly for the north-eastern portion of the continent. An estimate of the probability of aircraft encountering thunderstorms when traversing specified air routes has been calculated from the data given.

2. An Aperiodic Amplifier for Investigating the Wave-form of Atmospherics, by H.C. Webster.

Summary : An amplifier is described which produces a voltage amplification of about 120, with a maximum output of about 200 V. r.m.s., the amplification being independent of frequency between 50 c./Sec. and 5×10^5 c./sec. This amplifier was designed for use with an aperiodic aerial circuit for investigating the wave-form of atmospherics, suitable means of calibration being provided. Disturbances due to fluctuations in a.c. supply mains are eliminated by means of a push-pull arrangement.

3. Applications of the Modulating Electrode of Television Cathode-ray Tubes in Investigations of the Wave-form of Atmospherics, by H.C. Webster.

Summary : An apparatus is described which, when applied to

the modulating electrode of an electron-lens cathode-ray oscilloscope tube, prevents the electron-beam current from flowing except when a deflecting voltage in excess of a defined minimum is present between one pair of deflecting plates, and/or for a predetermined time following the occurrence of a specified deflecting voltage. The apparatus has been found useful for visual and photographic observations on the non-recurrent electric transients as produced by atmospherics.

1939

Sept.

- 7 De 11h20 à 13h 30 évanouissement avec les mêmes caractéristiques que le 6.
- 8 Evanouissement général pour toutes les transmissions mais sans la disparition totale des signaux.

NOTE : Pendant les évanouissements les résultats des observations de l'ionosphère sont resté normaux.
