

ITU-R Study Groups Activities relating to the Efficient Use and Management of Radiofrequency Spectrum

Sergio Buonomo

International Telecommunication Union (ITU); e-mail: sergio.buonomo@itu.int

ITU-R Study Groups deal with several aspects of radiocommunication, from the frequency spectrum allocation of various radiocommunication services to the procedures for the overall management of the spectrum. Study Groups develop and maintain technical documentation (Recommendations) and standards for the radio interface technologies used by terrestrial and satellite systems. They also carry out studies to mitigate the interference among different radio services at international level.
