

Use of Information and Communication Technologies for Disaster Management: Lessons Learned from the Great East Japan Earthquake and Tsunami in 2011

Prof. Yuko Murayama

Tsuda University, Japan - Chair of IFIP WG5.15 on Information Technology in Disaster Risk
Reduction (ITDRR); e-mail: murayama@tsuda.ac.jp

The Great East Japan Earthquake and Tsunami on March 11th, 2011 caused severe damage to the northern coast of the main island in Japan. We were working to help out the affected area in terms of Information and Communication Technology (ICT) support such as internet working and providing PCs. From our experiences, we looked into the research domain on the use of ICT for crisis response and disaster management. We introduce some of our work as well as deployment in this research domain.
